Using zEnterprise for Smart Analytics: Volume 2 Implementation Feb 22 2023 This IBM® Redbooks® publication series explains the assessment and implementation of a workload, integrated within IBM Smarter Banking® Showcase, and hosted at IBM Montpellier, France. Intended for decision-makers, consultants, architects, administrators, and specialists, this book is the second volume in a series of two: Assessment: Volume 1 (SG24-8007) describes how to evaluate the requirements of a new Smarter Analytics workload, addressing the user, system resources, and data processing profiles to identify the most optimal configuration by using IBM methodologies, such as fit-for-purpose. Given that the existing showcase is based on the IBM zEnterprise® System, deployment options include IBM z/OS®, Linux on IBM System z®, IBM AIX® running on IBM POWER® processor-based blades within the zEnterprise BladeCenter® Extension (zBX), and Windows Server 2008 running on System x® and BladeCenter blades also within zBX. Implementation: Volume 2 (SG24-8008), which you are reading, describes the setups that are involved in deploying the Smarter Analytics workload within the showcase. With multiple components, including IBM Cognos® BI, IBM Cognos TM1®, Cognos Metric Studio, IBM DB2® for z/OS, and a number of application design tools, the workload spans multiple operating environments. The use of application clustering, setting up performance policies by using Unified Resource Manager, and simulation test execution results are included.

Guide to Reprocessing of Hemodialyzers Nov 26 2020 The purpose of this book is to provide information for the nephrologist to gain a perspective on the medical, scientific, and technical aspects of reprocessing of hemodialyzers. The book is also designed to serve the needs of the associated medical, nursing, and technical staffs of dialysis facilities for data on reuse of hemodialyzers. As an information source, the book will prove to be useful for those who may be considering reprocessing of dialyzers, as well as persons who are currently involved in this aspect of the practice of nephrology. We have focused on the clinical and technological aspects of hemodialyzer reprocessing and have not dealt with socioeconomic considerations. We do wish to share with physicians performing hemodialysis several observations we have made as a result of assembling this volume. We believe that hemodialyzer reuse has had a beneficial impact on the quality of care for hemodialysis patients in consideration of the following factors. There is an increased awareness of membrane biocompatibility issues that has been brought to the forefront with the application of reuse. Utilization of hemodialyzer reprocessing has enabled nephrologists to compare the effect of various measures on biocompatibility when the patient is exposed to either a new or a reprocessed device. Previously, few readily available comparisons existed. In the practice of dialysis, water quality has always been of considerable importance. With the advent of widespread hemodialyzer reprocessing, the issues of water bacteriology and water quality have become more prominent.

Autodesk Arnold Render User Guide for MAYA Jan 21 2023 Arnold Arnold is an advanced cross-platform rendering library, or API, used by a number of prominent organizations in film, television, and animation, including Sony Pictures Imageworks. It was developed as a photo-realistic, physically-based ray tracing alternative to traditional scanline based rendering software for CG animation. Arnold uses cutting-edge algorithms that make the most effective use of your computer's hardware resources: memory, disk space, multiple processor cores, and SIMD/SSE units. The Arnold architecture was designed to easily adapt to existing pipelines. It is built on top of a pluggable node system; users can extend and customize the system by writing new shaders, cameras, filters, and output driver nodes, as well as procedural geometry, custom ray types and user-defined geometric data. The primary goal of the Arnold architecture is to provide a complete solution as a primary renderer for animation and visual effects. However, Arnold can also be used as: A ray server for traditional scanline renderers. A tool for baking/procedural generation of lighting data (lightmaps for videogames). An interactive rendering and relighting tool.
